

Polaris — HTML & CSS Project Checklist

Use this document to track progress and populate your landing page with realistic content.

1. Development Checklist

- 1 Set up project folder structure (HTML, CSS, assets).
- 2 Create semantic HTML skeleton (header, nav, main, footer).
- 3 Build navigation bar with logo, links, and CTA.
- 4 Design hero section with headline, subheading, and buttons.
- 5 Create features section using CSS Grid.
- 6 Design 'Why Polaris' two-column section.
- 7 Add call-to-action section with strong contrast.
- 8 Build minimal footer with links and copyright.
- 9 Apply typography styles and spacing consistency.
- 10 Add hover states and smooth transitions.
- 11 Test layout responsiveness manually (resize browser).
- 12 Clean up code and remove unused styles.

2. Sample Content for Polaris
